DRAFTSTOPPA – ENERGY EFFICIENT CEILING EXHAUST FAN NOW AVAILABLE FROM AUSTECH EXTERNAL BUILDING PRODUCTS PTY LTD.

After nearly two years in the design and development process this Australian made product now exceeds the sustainable Energy Authority level requirements for a totally self-sealing exhaust fan.

The DraftStoppa prevents cool or warm air escaping to or entering from the roof cavity. It also prevents polluted air or cooking smells from entering into other parts of the home or workplace.

“Testing indicates that in areas where ceiling fans are in use this adds up to an energy saving of up to 30% says Tony Curran, General Manager of Austech.

“In terms of maintaining its five-star energy rating Austech believes DraftStoppa offers a cost advantage over alternative sealing options”.
